

Sockets and switches in light steel framed separating walls

(Withdrawn - September 2024)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

Question

Is it acceptable to install recessed electrical sockets and switches in light steel framed separating walls?

Considerations

- Robust Details Part E gives guidance on the installation of recessed electrical sockets, switches etc. in light steel framed separating walls.
- The steel frame manufacturer may give guidance on the installation of services in walls constructed using their metal sections.
- The Building Standards (Scotland) do not permit wiring to be contained in separating walls constructed with or containing combustible materials.

Answer

In England and Wales and Northern Ireland recessed electrical sockets and switches may be fitted in light steel framed separating walls.

The steel frame manufacturer should be consulted for any specific guidance but generally it is acceptable if fittings are installed as shown in the diagram.

In Scotland, recessed electrical sockets, switches, wiring and pipes are unlikely to be accepted within framed separating walls. Acceptance of alternative solutions e.g. independent dry lining to form a service zone, should be sought from the local building control body.
