

Diagonal bracing to trussed rafters

(Withdrawn – January 2024)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

Question

Does the diagonal bracing to trussed rafters need to be fixed to the wall plate?

Considerations

- Diagonal bracing is provided to triangulate the roof structure and provide resistance to the lateral forces acting on the roof members.
- The Trussed Rafter Association technical handbook says that the diagonal bracing should be fixed to the wall plate.
- BS 5268 : Part 3 'Code of practice for trussed rafter roofs' refers to the bracing being fixed to the wall plate.
- BRE good building guide No. 8 describes methods of fixing the bracing to the wall plate.
- NHBC Standards clause 7.2 – D5(c) says diagonal bracing should be fixed to wall plate.

Answer

The diagonal bracing should be fixed to the wall plate.

- Where possible the bracing may extend over the wall plate and be fixed with two nails, or
- If the bracing cannot extend over the wall plate it can be cut on a splay and fixed to the top of the wall plate with a 30 x 5mm bent galvanised steel strap, twice nailed to each member.
