## Electrical accessories in partitions to protected areas within dwellings

(Withdrawn - January 2024)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

### **Question**

Is fire protection required to electrical accessories in plasterboard partitions enclosing protected entrance halls/protected stairways situated within the private parts of dwellings?

#### Considerations

- Partitions to protected halls/protected stairways situated within the private parts of flats and houses up to three floors are required to be 30 minutes fire resisting.
- The installation of electrical accessories may impair the fire resistance of the partition.
- Additional fire protection may be required, depending on the size of the aperture created and whether accessories are placed back to back.
- The Electrical Safety First best practice guide 'Electrical installations and their impact on the fire performance of domestic premises used as single family houses', provides related guidance.

#### **Answer**

The following installation guidance applies to flush-mounted accessories (including switches, sockets, flex outlet plates, television, data and telephone points etc.) in plasterboard partitions, which enclose protected entrance halls/protected stairways within private parts of dwellings.

Accessories should be installed as follows:

- Where possible back to back accessories i.e. accessories located within the same cavity between two timber or metal studs, should be avoided.
- Where accessories are back to back (possibly at different heights but within the same cavity) the accessory on the side at risk of fire (the room side of the partition) should be fire protected.
- Fire protection is not required to an accessory which does not share a cavity with another accessory.
- An accessory larger than a double socket when installed on the side at risk of fire should be fire protected regardless of whether it shares a cavity with other accessories. This should also apply to consumer units and to individual accessories located within 150mm of each other within the same cavity.

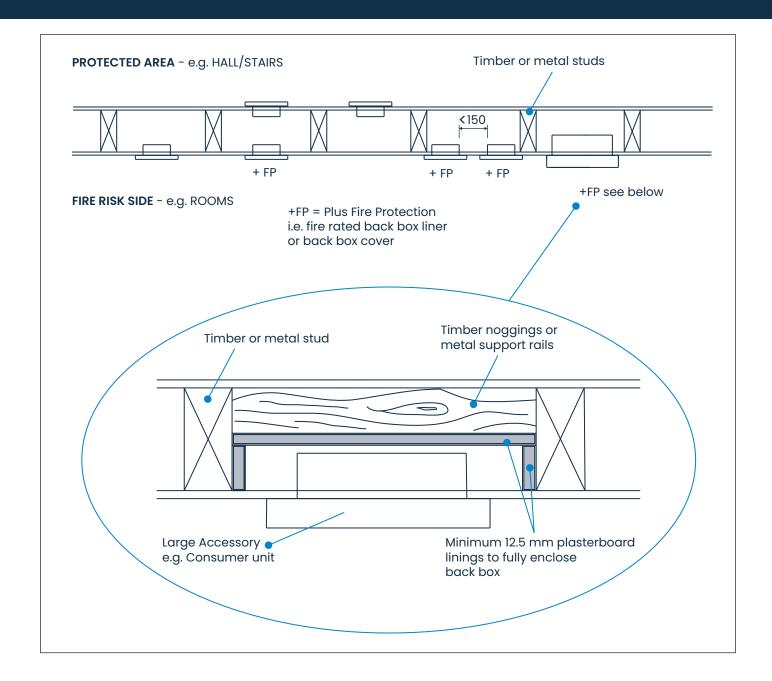

Acceptable fire protection measures (where 30 minutes fire resistance is required) include:

- Appropriately rfie rated back box liners and cover pads that fit over the rear of the back box, or
- An additional layer of minimum 12.5mm plasterboard with appropriate edges seals which fully encase the recessed back box of the accessory, or
- An alternative fire protection method which is supported by manufacturer's test data.
